

FEATURES TO LOOK FOR IN QUALITY FABRICA CARPET 2017

PREMIUM FIBERS- All Fabrica nylon products are manufactured from premium natural luster **type 6.6 Nylon**. Type 6.6 nylon possesses exceptional colorfastness, UV protection, and has a higher temperature capability for heat set retention. Fabrica uses only **100% New Zealand wool** in all its wool products.

YARN TWIST- From a manufacturing standpoint, yarn twist is the most important specification that determines performance in a quality cut-pile carpet. Simply stated, the tighter the twist, the better the appearance retention. Fabrica carpets have some of the highest yarn twists in the industry.

DENSITY- The number of tufts per square inch (determined by stitch rate and machine gauge) plays an important role in creating a beautiful appearance and maintaining pile resiliency. All carpet looks good new. **How will it look in 2, 3, 5 years?**

BECK DYEING- Or piece dyeing, means the carpet is dyed the old- fashioned way. Over **3 hours** of deep dye emersion gives greater color uniformity than carpets with high speed production methods which apply dye to the surface of the carpet. While lower in cost, it does not produce the quality and consistency of the beck dyeing process.

SOIL AND STAIN PROTECTION- Fabrica employs only state- of- the- art **pressurized foam** stain chemistry on all nylon products so you know your investment is protected.

GREEN LABEL PLUS- All Fabrica products are **Green Label Plus** certified, exceeding the highest indoor air quality standard for low VOC emissions.

ALLERGIES- There is no scientific study linking the rise in allergy and asthma to the use of carpet. In fact, several studies actually **disprove** any correlation. **Carpet-rug.org**

BACKING- Fabrica offers the finest, most tightly woven backings in the industry, which result in greater dimensional stability. We utilize pure latex for greater lamination properties. The pure latex also helps create soft, pliable carpet preferred by most carpet installers. No more carpet “rippling “when installed with double or architectural tack strip.

SURFACE SHEARING REFINEMENT- The ultimate detail which separates good from great carpet. The process is to shear irregularities from the surface of the carpeting, much like a mower cuts grass. Some Fabrica products are sheared as many as **20 times** to

produce the most refined carpet finish in the industry.
